

API Banking Troubleshooting Handbook: HTTP Status Codes, Use Cases, Errors, and Fixes

HTTP Status Code	Scenario	Discrepancy	Actionable
100 Continue	Initial part of a request has been received	Waiting for the client to send the request body	Ensure client sends complete request data.
101 Switching Protocols	Upgrading connection from HTTP to HTTPS	Protocol upgrade required	Ensure client supports and correctly handles the protocol upgrade.
102 Processing	Long-running transaction	Request is taking time to process	Inform the client of the processing delay.
103 Checkpoint	Interim response to prevent timeout	Request checkpoint received	Continue with the request and wait for final response.
200 OK	Payment processed successfully	No discrepancy	Log success and proceed with further actions.
201 Created	New account or transaction resource created	Resource created but not returned	Confirm resource creation and notify the user.
202 Accepted	Loan application received but not processed	Processing is pending	Inform the user of pending status and expected completion time.
203 Non-Authoritative Information	Response from a third-party service	Information might not be accurate	Verify the accuracy of third-party data.
204 No Content	Payment schedule deleted	No content in response	Log the successful deletion and notify the user if needed.
205 Reset Content	User session reset after timeout	Requesting content reset	Clear user session data and prompt for re-login.
206 Partial Content	Only part of the transaction history fetched	Partial data response	Fetch the remaining data in subsequent requests.
207 Multi-Status	Batch request processing multiple results	Different statuses for each sub-request	Handle each response separately based on its status.
208 Already Reported	Duplicate request for a transaction report	Report already generated	Return the existing report or notify the user.
226 IM Used	Resource retrieved from cache with modifications	Cached version used	Verify if the cached data is up to date.
300 Multiple Choices	Multiple payment methods available	User needs to choose one	Present available options to the user for selection.
301 Moved Permanently	API endpoint moved to a new URL	Permanent redirection	Update the client to use the new URL for future requests.

302 Found	Temporary redirection after user authentication	Redirect to another endpoint	Follow the redirection and handle the request accordingly.
303 See Other	Resource available at a different endpoint	Alternative endpoint provided	Redirect to the new endpoint and retry the request.
304 Not Modified	No change in transaction details since last request	Cached response used	Use cached data to improve response time.
305 Use Proxy	Bank requires request through a proxy	Direct access denied	Configure and use the proxy server for requests.
306 Switch Proxy	API requires a different proxy	Current proxy is no longer valid	Update proxy settings as per new requirements.
307 Temporary Redirect	Temporary redirection for a banking service	Service temporarily moved	Follow the redirect and retry the request.
308 Permanent Redirect	Banking API permanently moved to a new endpoint	Permanent redirection	Update client to use the new endpoint for all future requests.
400 Bad Request	Invalid input during a fund transfer	Incorrect or missing request parameters	Validate and correct input parameters before retrying.
401 Unauthorized	User not authenticated for an API transaction	Invalid API key or token	Check API key/token and update authentication mechanism.
402 Payment Required	Subscription fee due for API access	Payment not completed	Ensure subscription or payment is up to date.
403 Forbidden	Access to merchant account details denied	Insufficient permissions	Update user or API permissions to allow access.
404 Not Found	Invalid endpoint for fetching customer details	Endpoint does not exist	Verify and correct the API endpoint URL.
405 Method Not Allowed	GET used instead of POST for fund transfer	Incorrect HTTP method	Update the request to use the correct method.
406 Not Acceptable	Bank API only supports JSON, but XML requested	Unsupported response format	Modify request to accept supported response format (e.g., JSON).
408 Request Timeout	Transaction request timed out due to slow response	Request took too long	Retry the request with backoff or check network latency.
409 Conflict	Duplicate transaction request	Resource conflict detected	Resolve conflict by retrying with a unique identifier.
410 Gone	API endpoint for a service is no longer available	Service discontinued	Notify users of deprecation and provide alternative solutions.

411 Length Required	Missing Content-Length in request	Request body size not specified	Add the appropriate Content-Length header.
412 Precondition Failed	Bank requires certain headers or conditions	Precondition not met	Ensure all preconditions are satisfied before retrying.
413 Payload Too Large	Transaction request body exceeds size limit	Request payload too large	Compress or split the request into smaller parts.
414 URI Too Long	Query string exceeds server's limit	URL length exceeds limit	Shorten or optimize the URL.
415 Unsupported Media Type	Bank API does not support XML request	Unsupported content type	Use supported content type (e.g., JSON).
416 Range Not Satisfiable	Requesting non-existent portion of data	Requested range is invalid	Adjust the requested range based on available data.
417 Expectation Failed	API does not support Expect header	Unsupported expectation	Remove or adjust the Expect header.
418 I'm a Teapot	Fun Easter egg in APIs	N/A	Not applicable in banking APIs.
500 Internal Server Error	Bank server encountered an error	Internal server failure	Escalate to the bank's tech team and review server logs.
501 Not Implemented	Feature not available in the API	API does not support requested functionality	Check API documentation for available features.
502 Bad Gateway	Downstream service failed	Gateway cannot connect to downstream service	Retry the request and check downstream service status.
503 Service Unavailable	Bank API under maintenance	Service temporarily unavailable	Inform users of downtime and retry later.
504 Gateway Timeout	API request timed out at the gateway	Downstream server did not respond in time	Optimize request or retry later.
505 HTTP Version Not Supported	API does not support HTTP/1.0	Unsupported HTTP version	Update the client to use a supported version (e.g., HTTP/1.1).
